

GREENHOUSE GAS MANAGEMENT POLICY

As ATU Antalya Mağaza İşletmeciliği A.Ş., we consider combating climate change, effectively managing our greenhouse gas emissions, reducing our environmental impacts, and using resources efficiently to be among the key elements of our sustainable business approach in our Duty Free operations at Antalya Airport.

Within this framework, we hereby commit to:

- Defining the organisational and operational boundaries for greenhouse gas emissions arising from activities conducted and equipment operated under our control at the airport;
- Preparing an annual greenhouse gas inventory for consecutive 12-month periods, covering direct emissions from sources under our control (Scope 1) and indirect emissions associated with purchased electricity, heating and cooling (Scope 2);
- Ensuring the reliability, consistency and traceability of the activity data used in emission calculations; applying appropriate, up-to-date and traceable calculation factors; and implementing documented quality assurance procedures for the measuring equipment used to determine activity data;
- Complying with applicable environmental and climate legislation, other relevant obligations and the principles set out in our company's environmental policy;
- Using energy and water resources efficiently, taking measures to prevent refrigerant leaks, reducing food waste and other forms of waste generation, and promoting recycling and recovery practices;
- Establishing clear responsibilities and providing the competencies and resources required for effective greenhouse gas management, raising employee awareness and cooperating with relevant stakeholders;
- Reducing, by the end of 2030, the greenhouse gas emission intensity associated with Scope 1 and Scope 2 emissions from our airport operations by at least 5% compared with the 2025 base year; monitoring progress towards this target annually; and reviewing and updating emission reduction actions where necessary;
- Regularly reviewing and continually improving our greenhouse gas management performance and keeping this policy publicly available.

We hereby declare and undertake these commitments.
